

Main Ideas/Questions	Notes/Examples													
<p>WARM UP</p> <p>Do you see a pattern?</p>	<p>Directions: Simplify the following polynomials.</p> <ul style="list-style-type: none"> ♦ $(x-6)(x+6) = x^2 + 6x - 6x - 36 = x^2 - 36$ ← Difference of Squares ♦ $(k-11)(k-11) = k^2 - 11k - 11k + 121 = k^2 - 22k + 121$ ← ♦ $(3d+7)(3d+7) = 9d^2 + 21d + 21d + 49 = 9d^2 + 42d + 49$ ← <div style="text-align: right; margin-top: 10px;"> Perfect Square Trinomials </div>													
<p>Steps to Factor a Perfect Square Trinomial</p> <p>The 1st and last terms are perfect squares.</p>	<p>1.</p>	<p>Make sure you have a perfect square trinomial! You can take the square root of the first and last terms. The middle term is twice the product of the square root of the first and last terms.</p>												
	<p>2.</p>	<p>Use the following rules to factor:</p> $a^2 + 2ab + b^2 = (a+b)(a+b) = (a+b)^2$ $a^2 - 2ab + b^2 = (a-b)(a-b) = (a-b)^2$												
	<p>3.</p>	<p>Check your work by distributing!</p>												
<p>EXAMPLES</p>	<p>Directions: Factor each perfect square trinomial. Check your work by distributing. If a polynomial cannot be factored, write "prime".</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tbody> <tr> <td style="width: 50%; padding: 5px;">1. $x^2 + 10x + 25$ $(x+5)^2$</td> <td style="width: 50%; padding: 5px;">2. $s^2 - 8s + 16$ $(s-4)^2$</td> </tr> <tr> <td style="padding: 5px;">3. $p^2 + 8p + 64$ <i>prime</i></td> <td style="padding: 5px;">4. $n^2 - 16n + 64$ $(n-8)^2$</td> </tr> <tr> <td style="padding: 5px;">5. $m^2 + 24m + 144$ $(m+12)^2$</td> <td style="padding: 5px;">6. $169 - 26r + r^2$ $(13-r)^2$</td> </tr> <tr> <td style="padding: 5px;">7. $9g^2 + 12g + 4$ $(3g+2)^2$</td> <td style="padding: 5px;">8. $7x^2 - 9x + 2$ <i>prime</i></td> </tr> <tr> <td style="padding: 5px;">9. $16t^2 + 48t + 36$ $(4t+6)^2$</td> <td style="padding: 5px;">10. $4z^2 - 36z + 81$ $(2z-9)^2$</td> </tr> <tr> <td style="padding: 5px;">11. $2u^2 + 12u + 18$ $2(u+3)^2$</td> <td style="padding: 5px;">12. $16d^2 - 40de + 25e^2$ $(4d-5e)^2$</td> </tr> </tbody> </table>		1. $x^2 + 10x + 25$ $(x+5)^2$	2. $s^2 - 8s + 16$ $(s-4)^2$	3. $p^2 + 8p + 64$ <i>prime</i>	4. $n^2 - 16n + 64$ $(n-8)^2$	5. $m^2 + 24m + 144$ $(m+12)^2$	6. $169 - 26r + r^2$ $(13-r)^2$	7. $9g^2 + 12g + 4$ $(3g+2)^2$	8. $7x^2 - 9x + 2$ <i>prime</i>	9. $16t^2 + 48t + 36$ $(4t+6)^2$	10. $4z^2 - 36z + 81$ $(2z-9)^2$	11. $2u^2 + 12u + 18$ $2(u+3)^2$	12. $16d^2 - 40de + 25e^2$ $(4d-5e)^2$
1. $x^2 + 10x + 25$ $(x+5)^2$	2. $s^2 - 8s + 16$ $(s-4)^2$													
3. $p^2 + 8p + 64$ <i>prime</i>	4. $n^2 - 16n + 64$ $(n-8)^2$													
5. $m^2 + 24m + 144$ $(m+12)^2$	6. $169 - 26r + r^2$ $(13-r)^2$													
7. $9g^2 + 12g + 4$ $(3g+2)^2$	8. $7x^2 - 9x + 2$ <i>prime</i>													
9. $16t^2 + 48t + 36$ $(4t+6)^2$	10. $4z^2 - 36z + 81$ $(2z-9)^2$
