

1. Write the equation of each function $g(x)$ after the translation described.

a. $f(x) = 3x + 2$ after a reflection over the y -axis. $g(x) = \underline{3(-x) + 2 \text{ or } -3x + 2}$

b. $f(x) = -6x^2$ after a reflection over the x -axis. $g(x) = \underline{\quad}$

c. $f(x) = 8^x$ after a reflection over the y -axis. $g(x) = \underline{\quad}$

d. $f(x) = -4x + 9$ after a reflection over the x -axis. $g(x) = \underline{\quad}$

e. $f(x) = 7^{-x}$ after a reflection over the y -axis. $g(x) = \underline{\quad}$

f. $f(x) = 2x^3$ after a reflection over the x -axis. $g(x) = \underline{\quad}$

g. $f(x) = \frac{6}{7}x^4$ after a reflection over the y -axis. $g(x) = \underline{\quad}$

2. Describe each graph $g(x)$ in relation to its basic function $f(x)$.

a. Compare $g(x) = -(7x + 1)$ to the basic function $f(x) = 7x + 1$

Reflection over the x -axis or a vertical reflection.

b. Compare $g(x) = b^{-x}$ to the basic function $f(x) = b^x$

c. Compare $g(x) = -9x^2$ to the basic function $f(x) = 9x^2$

d. Compare $g(x) = (-x)^2$ or x^2 to the basic function $f(x) = x^2$

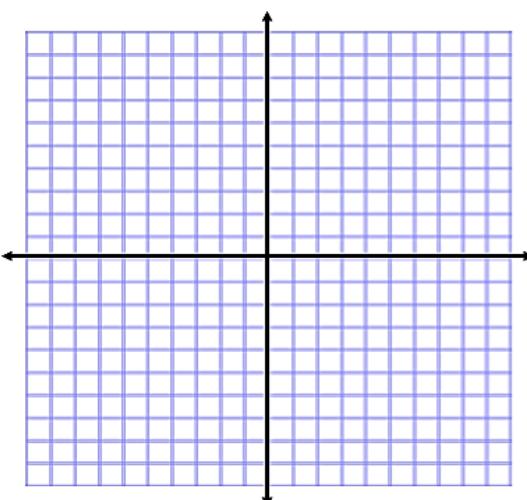

e. Compare $g(x) = -(-b^x)$ or b^x to the basic function $f(x) = -b^x$

f. Compare $g(x) = 2(-x) + 7$ or $-2x + 7$ to the basic function $f(x) = 2x + 7$

3. Graph each function. Then graph the transformation.

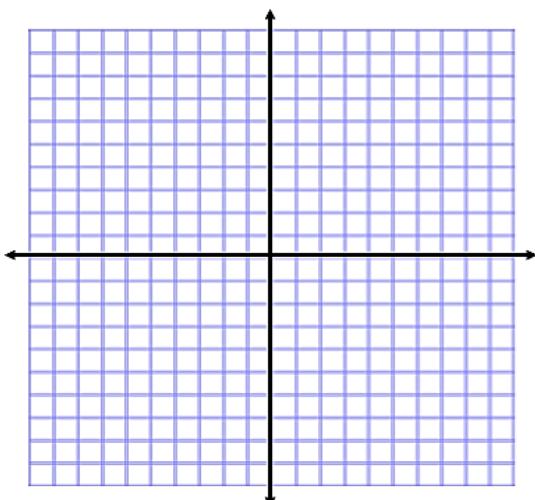

a. $f(x) = 2x + 1; g(x) = -(2x + 1)$
