

Algebra 1: 7.1 Warm Up  
Writing a Linear Inequality

Name \_\_\_\_\_ Period \_\_\_\_\_

Math Challenge

Write the linear inequality in slope-intercept form for the graph displayed above.

$$y < -\frac{1}{2}x + 4$$

Is the point  $(8, 0)$  a solution?

No,  $(8, 0)$  lies on the dashed line. Each point on a *dashed* boundary line is not a solution. Only points on a solid boundary line are solutions.
